

14 ways to change your commute

As lockdown eases the government is promoting a message of alternative transport and it looks certain that we will be using bikes and scooters to navigate our journeys post COVID-19. Maddyness shares its selection of transport and commute alternatives.

Lockdown has had a positive impact on the British self-isolating population. With the government asking to avoid public transport to limit the spread of coronavirus, many - apart from car drivers - chose cycling as a more secure and greener way to commute.

But most UK cities are lacking cycle lanes, a challenge that the government is strongly involved in tackling with a £2B nationwide package aiming to improve infrastructure for cyclists and pedestrians, introducing emergency bike lanes and streets to support the transport network, as well as fast-tracking trials of rental e-scooters.

Bicycles

Beryl is a passionate team of designers, engineers, researchers and cyclists creating products that tackle the bumps in the way of urban mobility. They aim to solve real problems with simple, intelligent products, using innovative technology because they believe that getting more people cycling will improve the cities of the future by making roads safer, more efficient and our world

healthier. Beryl puts riders at the heart of its product development such as testing new lights or features in its Beryl App.

The Brompton bike was conceived as a product to help improve city living. It has established itself as the ideal choice for all those who are living or interacting with cities. The bike can be folded to a third of its size in a matter of seconds and is small enough to be taken on all forms of public transport. In fact, 42 Bromptons can fit into one car parking space and now there is an electric version!
