

Half of job seekers have experienced negative bias when applying for roles

Despite all the talk and focus of companies on DE&I, a new survey reveals that half (50.73%) of job seekers have encountered negative bias during the application process.

CV Wizard surveyed 1,000 people aged 18-60 to shed light on key trends, challenges and opportunities for job seekers, and found that older professionals meet the most bias, and were more likely to have their skills tested when applying for roles.

Active bias

The grouping of people who said they experienced the most bias was men aged 45-60 (68.557%), followed by women in the same age bracket (66.67%).

Out of a number of factors, including religion, sexual orientation, name, disability, criminal background and weight, age (47.06%), race (17.65%), gender (20.59%) and neighbourhood (3.82%) were the most commonly-cited factors for workplace bias.

Interestingly, overall 38.02% of men said they experienced age-related bias, but this fell to 4.26% of women. However, almost double of the women surveyed (31.01%) said they experienced gender bias, compared to 15.59% of men.

Addressing bias

A majority of respondents (66.89%) said they would prefer if job applications were anonymous to reduce bias, signalling a pressing need for further inclusive practices in hiring.

Considering earlier stats, it's not surprising that this figure is higher in the 45-60 age group – 78% of that category's respondents want to see anonymous application processes.

Anonymous job applications strip away identifiable information such as names, addresses, and even educational institutions, so that companies can create a more level-playing field for all applicants.

When job seeking, look for details on how your chosen organisation has adopted inclusive hiring practices in the job spec.

Some have trained hiring managers specifically, others have invested in blind recruitment platforms that turn CVs into anonymous ones to focus on skills and experience instead, while others use redaction software to block out educational institutions, addresses and years of study etc.

Also note if the organisation is collecting diversity data when you complete the initial application process. This tells you a lot about how committed a company is to battling systemic bias in the workplace. If you get through to the interview stage, you can also ask about inclusive hiring policies that the company currently operates and is focused on improving.

Looking for a more inclusive place of work? The [*Maddyness Job Board*](#) is the perfect place to focus your search. It features thousands of jobs in progressive organisations, including the three below.

Game Engineering, Programming & Tech Art - Talent Community, Keywords Studios, Scotland/Remote
